A Level and International Baccalaureate Diploma Supported Qualifications (Subjects)

From the Adaptive Test and Average (I)GCSE Score Baselines Based on Exam Year 2025 Qualification Analysis

We collect exam result data for almost all subjects within the qualification types we analyse (A Level, AS Level, IB Higher and IB Standard). However, we only publish reports for supported qualifications i.e. those that have met our statistical criteria. The criteria include sample size (number of students and institutions represented in the sample) and the strength of the statistical correlations.

If a subject is supported, it will be included in our 2025 Value Added Reports where students have results in that subject, and in our 2026 and 2027 predictive reports, where students have subject choices assigned for those subjects.

For each qualification, there are subsidiary value-added reports available based on syllabus/exam board, institution type, gender and ethnicity. There are also two possible baselines from which the main Alis/ Cambridge IBE Insight data can be produced. Please note that, providing these separate analyses requires the data sample for each qualification to be divided, which results in a smaller sample size for each division and the statistical criteria are applied to each separate sample. As a consequence, it is possible for a particular qualification to appear in some reports but not others.

The table below shows which qualifications are included in the main reports from each of the two possible baselines. It does not include information about which qualifications appear in the subsidiary analyses. You should not expect the same qualifications to appear in the subsidiary analyses as it is likely that fewer samples will have met the statistical criteria due to the further division of the data.

For more information and guidance on using Alis/Cambridge IBE Insight, please see our Helpcentre.
