

Interpreting Cambridge Primary Insight Reports

A guide for InCAS users

Although at first glance it might seem like the reporting is quite different in our new assessment platform, the data itself is very similar. We've prepared this guide so you can find the report you usually use in InCAS and understand which of the new reports you would use to access the same information.

The reports you have access to will depend on the Cambridge Primary Insight package you take, but unless you've asked us to change it, you will be on the Plus package for your first year using Cambridge Primary Insight. Attitudes is no longer an integrated part of the assessment like it was with InCAS. Instead, there is a new, standalone Cambridge Attitudes Insight assessment, which you will have access to. This assesses your students' engagement and confidence in their learning, reading and mathematics.

The data and reports you will have access to will vary depending on your package. You can find full details of what to expect in each package here <https://www.cambridge.org/insight/primary-insight>

Here is an overview of our Cambridge Primary Insight reports:

Summary of Scores

This report allows you to view the assessment outcomes for your students as age-equivalent and age-standardised scores. In the Plus package, Teaching and Learning Guidance can be viewed and downloaded here, based on your students' ages and standardised scores.

Year Group Overview

This report provides a simple view of the distribution of assessment scores for each year group across your school.

Individual Progress Report

This report shows the progress that a student makes over a period of time.

Individual Student Report (ISR)

This report provides a simple graph and a table showing the outcomes for an individual student in each of the assessment sections completed. Outcomes will be presented at section level in Plus package, and at module level in Core package.

Report for Parents and Guardians

This report provides a simple graph showing the assessment outcomes for an individual student together with descriptive text explaining to parents and guardians the purpose of each section in the assessment. Only available in Plus package.

All scores' CSV available

You can download an 'All Scores' csv by clicking the "Download" button in the Summary of Scores report. This contains all scores for all students who have completed the assessment in the academic year you are viewing.

Using the Report Filters

The CPI reports have filters that allow you to select the data you want to view on screen, such as academic year, year group, class and, depending on the report, student, or score type.

Academic year	Year group	Class	Students	Score type
2024-25	All	All	All	Age-standardised

Some reports also include further selection buttons - to select the score range for Teaching and Learning Guidance, for example.

Score range: ☒ All ☐ Low (<85) ☐ Low average (85-99.9) ☐ High average (100-115) ☐ High (>115)

Downloads

Reports can be downloaded by clicking the download button in any report.

All reports can be downloaded as PDFs. You can also download a Comma Separated Variable (CSV) file of CPI scores for the selected academic year. This is the equivalent of the InCAS results spreadsheet. Simply click the "Download" button in the Summary of Scores report and choose "CSV download". Files download directly into the downloads folder of the device you are working on.

The CPI Summary of Scores report provides information that you would find on the InCAS Standard Feedback for the five modules: Mathematics, Arithmetic, Reading, Spelling and Developed Ability. Select “age-equivalent” in the score type filter to see age equivalent scores.

Age-equivalent section scores for each module can be displayed by choosing the module you want to view using the “modules” filter (only for Plus users).

Age-standardised scores are displayed by selecting “age-standardised” in the score type filter. Scores below 85 are highlighted in orange. Scores above 115 are highlighted in green.

Teaching and Learning Guidance

For Plus users, we've added evidenced-based teaching and learning ideas and activities to our high-quality baseline assessment data reporting, based on your students' ages and standardised scores. This Teaching and Learning Guidance is available via the Summary of Scores report.

Use the report filters to select a single year group, age-standardised score type and a single module (Mathematics, Arithmetic, Reading or Spelling). You will be presented with score range buttons to choose from: Low, Low average, High average or High. When you click “View Guidance” you will see the suggested approaches and activities for the selected group.

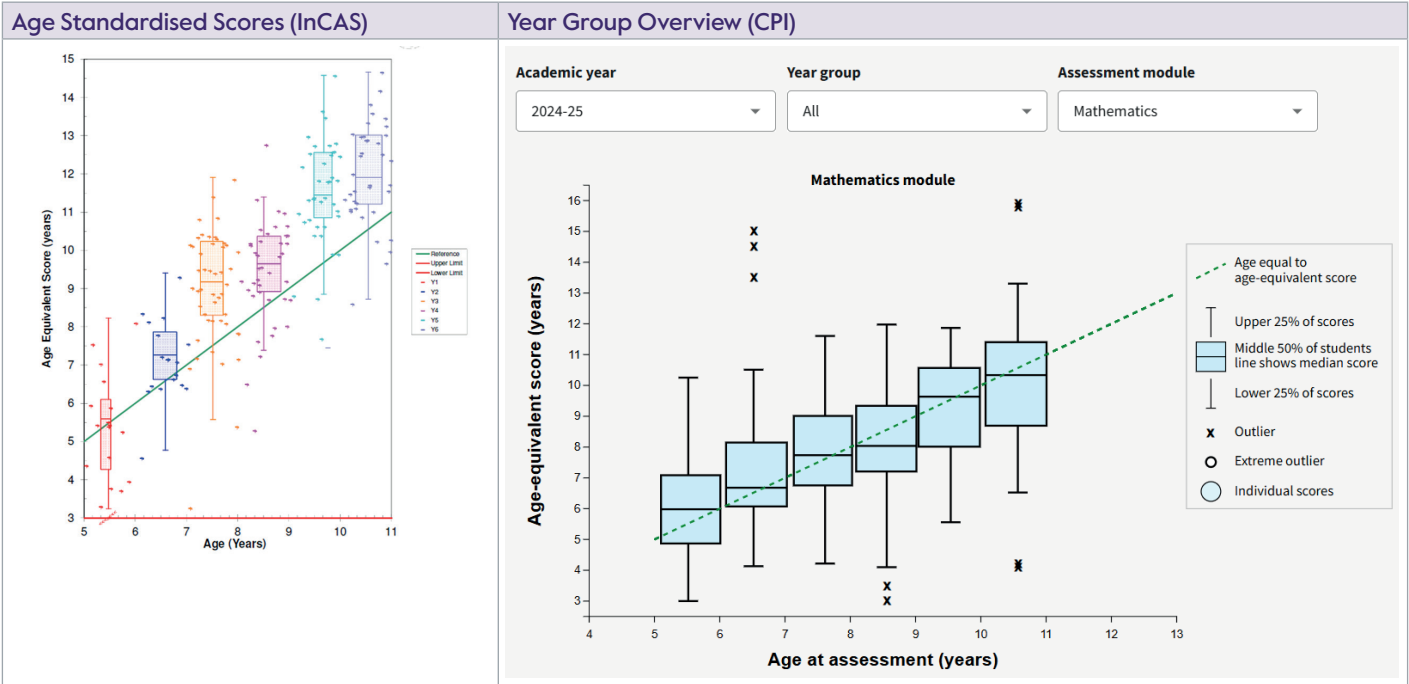

© Cambridge University Press and Assessment, 2025

The InCAS Custom Feedback includes both a Scores chart and a Scores table. In CPI, the Individual Student Report combines the data found in the InCAS Scores Chart and Scores Tables. You can swap between age-equivalent and age-standardised chart views using a 'Score display' button. Scores Interpretation Guidance is also included for Plus users in the age standardised view. The system automatically provides interpretations of results for that student, in each of the five modules of the assessment based on their age-standardised score.

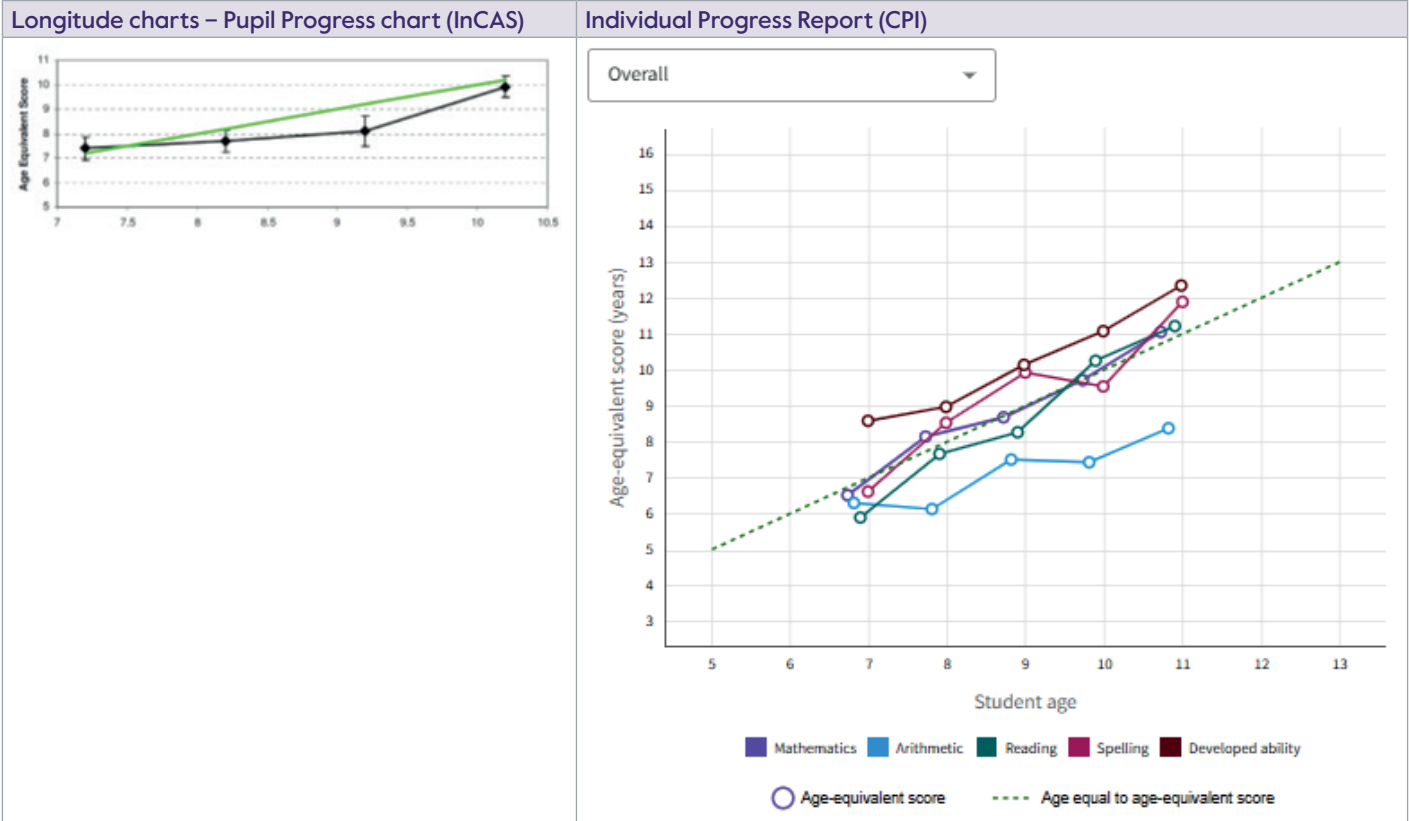

Year Group Overview

The Year Group Overview shows the information found in the InCAS Age Comparison Chart. Use filters to select a single year group or display all year groups. Year group performance is shown as a box plot, or if there are fewer than ten students in the group, as a circle for each student. You can hover over a blue box to view the data numerically for a year group. The InCAS Age Comparison Chart included the option to view sub-module (section) information for each subject. The Year Group Overview Report only displays module data.

Individual Progress Report

This report shows the progress a student makes based on their age-equivalent Scores throughout their time at your school. This is displayed as a line graph with a table of scores below. Use the module filter to see progress in each section of the Mathematics, Arithmetic, Reading and Developed Ability modules.

CPI contains a report that is not available in the InCAS system. The report for Parents and Carers shows, through text and graphics, how a student performed in the different modules of the baseline assessment and gives examples of the types of questions they were asked.

ii. How did do in the assessment?

	Performance below typical range	Performance within typical range	Performance above typical range
Mathematics			●
Arithmetic			●
Reading		●	
Spelling		●	
Developed ability			●

② What is Cambridge Primary Insight?

Cambridge Primary Insight is a computer adaptive assessment designed for children aged between five and eleven years. The assessment adapts according to the student's responses, presenting questions of an appropriate difficulty to assess where they are in their learning.

It is designed to help teachers understand where is in their learning and identify areas of strength and areas for development.

The assessment result can then be used to inform a teacher's lesson planning, set motivational and realistic targets, and contribute to decisions about resourcing or intervention.

General guidance

's teachers will always be cautious of making decisions based on a single assessment. They will use this information together with other sources of evidence, such as examples of 's work, to build-up a more general overview of how is performing across a range of subject areas.

If you have any questions about the assessment, please arrange to speak to 's teacher. Find out more on our [Parent Support Hub](#)
